PROJECTS

Jarvis • 05/2025 - 11/2025
Jarvis is a voice-activated virtual assistant developed using Python, aimed at automating desktop tasks and enhancing user productivity through natural language commands. It can tell the current time, date, and weather, open applications and websites, perform Google searches, define words using a built-in dictionary, and even share random jokes and many more. Built entirely from scratch without any mentorship or paid courses, Jarvis integrates multiple Python libraries such as speech_recognition, pyttsx3, pywhatkit, and datetime, showcasing strong scripting ability and real-world application of programming skills. The project reflects a self-motivated approach, a problem-solving mindset, and the ability to create meaningful, interactive tools through independent learning.

SKILLS

Hard skills: Python, HTML, CSS, JavaScript, C programming, Data Structures, GitHub, React.js

Soft skills: Communication, Problem-Solving, Team Collaboration, Time Management, Creativity, Accountability, Positive Attitude
